

I am from Mississippi and subscribe to satellite radio and enjoy all of it. Including the traffic and weather. I travel a great deal, and these channels provide me with the ability to take the safest route without trying to find a local radio station in that particular city that provides the same information. With satellite radio, I find the city on the radio listing and dial in that station. Not only is that safer than searching for a local channel, but to me its easier.

Please reject this bill and allow satellite radio to continue to enrich our lives.
